Key drivers of performance:

- All investment options delivered negative returns, except the Cash investment option which was slightly positive.
- Australian Equities asset class was a key detractor for all investment options. Primarily driven by a sell-off in Australian equities following the higher-than-expected April inflation print.
- For the lower risk investment options, Fixed Interest was also a detractor. Bond markets posted negative performance as yields adjusted to the expectation that interest rates may stay higher for longer.
- International Equities asset class was a positive contributor driven by gains in US Technology stocks.
- For the higher risk investment options, Diversified Strategies Growth also contributed positively as Private Markets and Core Infrastructure benefited from the receipt of March quarter valuations.
- The Reserve Bank of Australia (RBA) increased the Official Cash Rate (OCR) 0.25% from 3.60% to 3.85%. At the time of writing, the RBA had increased rates a further 0.25% to 4.10% (7 June 2023). The market is now pricing further tightening may be required and for monetary policy to stay restrictive for longer than previously expected.

Financial market commentary

There were a range of themes that sent ripple effects through financial markets in May. Uncertainty relating to the US debt ceiling negotiations contributed to the rise in bond yields and lower equity markets. The receipt of economic data in China indicated a slowdown in growth and decreased investor optimism. Finally, recession fears increased in the Eurozone with falling consumer confidence and the regions reliance on Chinese growth.

Bonds weakened as inflation and interest rates continue to drive markets globally. The persistence of inflation in the developed world caused bond yields to rise as markets adjusted to the expectation that interest rates may stay higher for longer. Australian and global bonds fell 1.4% and 0.4%, respectively. Indeed, central banks continued to raise rates during May. Among those were the Reserve Bank of Australia, the US Federal Reserve, Bank of England, and the European Central Bank. At the time of writing (15 June) the US Federal paused their rate rising cycle for the first time in 15 months but signalled their willingness to increase rates in the future.

The Australian equity market's biggest sectors, Materials and Financial encountered declines through the month. Further sell offs in Australian equities occurred at the end of the month following the higher-than-expected April inflation print, with the Australian equity market ending the month 2.5% lower.

Global equities were also weak, falling 0.2% for the month as markets reacted to persistent sticky inflation and global interest rate rises. There was however a narrow rally in a few US Technology companies, those involved in Artificial Intelligence.
